DETAILED ACTION

Suspension

1. Pursuant to the Board of Appeal's final decision regarding U.S. Application No. 08/973,019, suspension has been lifted. As set forth in the decision on petition requesting suspension, the instant application was granted a suspension pending the decision on appeal of the '019 application. On November 27, 2002, the Board affirmed the rejection of the '019 application and on August 27, 2003, the Board denied applicant's request for reconsideration, thus terminating prosecution of the '019 application. An action on the merits follows.

Priority

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

3. The information disclosure statement (IDS) submitted on 18 October 2002 has been considered by the examiner. It is noted that the reference to Aosaki et al. has the wrong patent number.

Drawings

4. The examiner notes that drawings are not in the case. The drawings from the corresponding PCT/SE00/01059 case will suffice for an initial action on the merits; however,

applicant is advised to furnish drawings under 37 CFR 1.81. No new matter may be introduced in the required drawing.

Claim Objections

5. Claims 30-32, 40-42 and 55-56 are objected to because of the following informalities: In claim 30, delete "being" (lines 6&9) and change "stands" to ---strands---. In claim 31, change "being" to -is-- or --comprises— and insert -and-- before "wherein". In claim 32, change "being" to -is-- or --comprises— and insert -and-- before "substantially". In claims 40-41, change "is/are comprised of" to ---comprises---. In claim 42, change "being" to -is-- or --comprises— and change "are comprised of" to ---comprises---. In claims 55-56, change "are comprised of" to ---comprises---. Appropriate correction is required.

Claim Rejections - 35 USC § 112

6. Claims 30-64 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In claim 30, recitation "share" is vague. Is this equivalent to "number"?

Claim Rejections - 35 USC § 102

7. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

8. Claim 65 is rejected under 35 U.S.C. 102(b) as being anticipated by Leijon et al. (WO 97/45930). Leijon teaches a conductor for high-voltage windings and rotating electric machine comprising: a stator (p.9, lines 26-28); a winding (p.9, lines 26-28) that includes a cable (Fig.4) having a flexible electric conductor 1, an inner semiconductor layer 2 on the flexible electric conductor 1, a solid insulation layer on the inner semiconductor layer 3, and an outer semiconductor layer 4 on the solid insulation layer 3; means for minimizing eddy current losses (p.12, lines 1-2; p.15, lines 24-27); and means for containing high voltage electric field in the cable (since the outer layer is grounded, no e-field concentrations within the sheet or coil-end regions are obtained; further, thermal movement if prevented; p.11, lines 8-30).

Allowable Subject Matter

9. Claims 30-64 would be allowable if rewritten or amended to overcome the objections and the rejection under 35 U.S.C. 112, second paragraph, set forth in this Office action. The prior art does not teach or suggest a high voltage rotating electric machine comprising a rotor, a stator with slots and a winding having a plurality of cable layers each including an inner conductor with a plurality of strands and an insulation disposed about the inner conductor; the plurality of cable layers arranged substantially axially through the stator slots and substantially

radially outside one another; wherein the cable layers include an inner cable layer and an outer cable layer, the inner cable layer disposed in the slot radially closer to the rotor than the outer cable layer, and a larger "share"---i.e. number---of strands in the inner cable layer are electrically insulated from one another than strands in the inner conductor of the outer cable layer.
